

What is STRATIFY?

It's a tool we use to help you and your doctor make the best decisions about your care.

What does STRATIFY do?

Calculates Score

STRATIFY calculates a score using data from your chart, like vital signs, medical history, and labs.

Determines Risk

This score helps your doctor see if your risk of complications in the next 30 days is low or high.

Care Plan

The score helps us decide if you need to be in the hospital or if it's safe for you to get care at home.

If your doctor decides to do something different than what STRATIFY suggests, they will talk with you about it.
